Lead Generation Module — Working Prototype

Prepared for: Internship Trainer Review | Reference: Final Lead Generation Product v3.0

1. Assignment

The trainer shared Zenith India's "Final Lead Generation Product" document — a strategy playbook covering target sectors, decision-makers, lead sources, a weekly outreach cadence, and copy-paste scripts. The task was to turn this strategy into a lead generation module that can actually be executed across each source to generate leads, rather than a document that stays unopened after week one.

2. Approach

The source document already defines the strategy correctly — sectors, contacts, cadence, and scripts. What it does not provide is a system: a place to log a lead once, see it across every channel, and know this week's numbers against target without manually counting messages sent. That gap is what this submission addresses.

Treating Section 3 of the original document ("Lead Tracker — Exact Fields") as the product requirement, and Section 7 ("Where to Find Leads") as the five execution surfaces, the module below was built as the working prototype that satisfies both.

3. What Was Built

A ten-tab spreadsheet module, delivered as: Zenith_Lead_Generation_Module.xlsx

Tab	Purpose
Instructions	How the module works, tab-by-tab usage guide, conventions (colour coding).
Dashboard	Live weekly numbers vs. target; pipeline funnel and sector split — all formula-driven, auto-updates as leads are logged.
Master Tracker	Single source of truth. Every lead at Contacted stage or beyond is logged here with status through Won/Lost.
LinkedIn	Connection requests, acceptance, main message, follow-up date — matches the doc's Monday/Tuesday actions.
Naukri	Hiring-signal capture (a company hiring AI/IT roles = buying signal) → decision-maker lookup.
Google-Web	Company/leadership-page research for target sectors not surfaced via LinkedIn or Naukri.
Referrals	Introductions from existing clients — the doc's highest-quality source, tracked separately so it isn't lost in general outreach.
Events	Contacts made at hospitality/healthcare/fintech/AI meetups.
Weekly Checklist	Mon-Fri cadence with the doc's minimum numbers; a place to log actuals for 6 straight weeks.
Message Templates	All copy-paste scripts (connection note, main message, follow-up, sector speeches, call flow) in one place.

4. Weekly Execution Flow

Mirrors Section 4 of the source document, with a place to log actuals each week directly in the module (Weekly Checklist tab).

Day	Action	Target
Monday	Work LinkedIn tab: search + send connection requests	20 requests

Day	Action	Target
Tuesday	Message accepted connections, log follow-up dates	15 messages
Wednesday	Work Naukri + Google-Web tabs for hiring signals and leadership contacts	15 companies
Thursday	More outreach, book discovery calls	10 messages + calls
Friday	Reconcile all source tabs into Master Tracker, review Dashboard vs. target	Full update

5. Key Design Decisions

- One Master Tracker as the single source of truth — every source tab feeds into it, so status (New → Contacted → Replied → Meeting → Proposal → Won/Lost) is never split across five separate sheets.
- Separate tabs per source instead of one generic form, because each channel surfaces a different signal at capture time: a Naukri hire signal needs a job-role field; a LinkedIn contact needs connection/acceptance tracking; a referral needs to record who introduced it.
- Dashboard numbers are formulas (COUNTIFS against date range and status), not manually typed totals — so the weekly actual-vs-target view stays accurate as long as leads are logged on the day they're added.
- Dropdowns (data validation) on Status, Sector, Source, and Y/N fields prevent free-text drift that would silently break the Dashboard's counts.
- Every tab carries one labelled example row showing the expected format, excluded from the Dashboard's formulas so it never inflates real counts — a new team member can start logging correctly without a separate training document.

6. Success Metrics

Tracked automatically on the Dashboard tab, both for the current week and all-time:

- Weekly activity vs. minimums: 20 connection requests, 25 messages, 15 new companies, 10 follow-ups, meetings booked.
- Pipeline funnel counts across all seven statuses, all-time.
- Lead volume by sector (Hotel Chains, Hospital Chains, Fintech & Banking, AI/SaaS/Tech, Manufacturing & Retail).

7. Executed — Week 1 Leads Sourced

To demonstrate the module is not just a template, it was run for real: six leads were researched and logged across three sources, using public information (press appointments, event coverage, funding news) as the buying signals the source document describes in Section 7.

Company	Contact	Sector	Source	Signal
Lemon Tree Hotels	Kartikeya Singh, Chief Digital & Transformation Officer	Hotel Chains	Google-Web	New digital leadership hire (Jun 2026)
Fortis Healthcare	CIO (last confirmed 2024 - flagged for verification)	Hospital Chains	Google-Web	No recent update found - verify before outreach
SmartInfoLogiks	Bismay Mohapatra, CTO	AI/SaaS/Tech	Events	Showcased AI lending platform at industry summit
Mahindra & Mahindra (Auto)	Rucha Nanavati, Chief Digital Transformation Officer	Manufacturing & Retail	Events	Active on CIO advisory council,

Company	Contact	Sector	Source	Signal
				large-scale digital mandate
BC Jindal Group	Rajeev Singhania, Group CIO	Manufacturing & Retail	Google-Web	Publicly discussed ERP migration complexity
Sarvam AI	Pratyush Kumar, Co-founder	AI/SaaS/Tech	Google-Web	$234M Series B close, Jun 2026 - scaling fast

All six are logged in Master Tracker at Status = New, plus their respective source tabs (Google-Web, Events). The Dashboard's Pipeline Funnel and Sector breakdown update automatically and already reflect this — 2 leads each in AI/SaaS/Tech and Manufacturing & Retail; 1 each in Hotel Chains and Hospital Chains, the latter flagged for contact verification before outreach.

This is week 1 of the doc's own instruction to run the system for at least 6 weeks before judging results (Section 9). Next actions: verify the flagged Fortis contact, find LinkedIn profiles for all six, and begin Monday's connection-request step.

8. Next Steps (v2)

- Add a conversion-rate view (Contacted → Meeting → Won) once 6 weeks of real data exist, per the source document's own instruction to run the checklist for at least 6 weeks before judging results.
- If the team scales past one owner, add an Owner-level filter on the Dashboard.
- Automate LinkedIn/Naukri data entry via API or browser extension once manual logging habits are established — the module is deliberately manual-first so it can be adopted in week one without new tooling.

9. Attachment

_Lead_Generation_Module.xlsx — the working module, pre-loaded with the six leads above, ready to continue from Monday.
